Mr. Ron B. Schiller
30 Park Avenue
Avenel, New Jersey

Dear Ron....

Glad to hear from someone back there East. Beginning to think we didn't carry past the Rockies. Did get a note from our old friend in Burlington, Vt., tho. Seems to me I've heard from you at other stations where I've been. How about KJUN Redmond, Oregon or KRUL Corvallis, Oregon. I used to be chief there.

This is definite confirmation of reception of KUTI on the date noted, 20 February. We were on a Frequency Check at the time. Surprised you got us clearly for RCA in California complained they couldn't read us for interference. 'Course they're closer to the big Mexico City station XEW and they may have been on late. (XEW is 500kw).

In answer to your query, yes, we are 1000w now. Have been since May last. Our effective power is also up because we drive the h--- out of this old beast of an RCA BTA 1L. We operate Hi-Fi, literally. Our output is up to 13000. Clean, too...no distortion at all, literally almost...less than .05%. We have a jury-rigged, re-wired RCA 98A limiter set up as a ProGar amplifier and we up our modulation percentage to hold as near 85 average as we can. The result is we can be heard plainly further out than the two 5kw stations in town. Makes it very nice listener-wise. You can't hear allthe hi-fi unless you have a wide band-pass receiver, but even with an ordinary receiver we come in much cleaner and brighter.

Enuf of this. Good to hear from you. If you should read us again drop us a card anyway. We test the third Monday ayem....next will be 0300 your time the 19th.....Sunday nite or Monday morning as you like to call it. Thanx again for the note/report. 'Twil be duly filed.

Recordially,

Donald M. Gay, ce/KUTI
